Horses are Weird!
By EldritchEquine

Horses can't snorkle
They Can't Breathe Through their Mouths.

FLOATING
As horses eat, they wear down their teeth into sharp Points.
This can be painful. So, they drug the horse and file down the teeth. This is called floating.
File

LAYING DOWN
Horses are so heavy, they can cut off blood supply to their organs if they lay down too long.
This can Happen after 5 hours of being down...

COLIC
Horses can't throw up.
They can and DO die of tummy aches...

Their intestines aren't really attached to their abdomen. Horses instinct when experience tummy Pain is...
To Roll...
Rolling with loose guts can flip and twist the intestines!!!
The horse will die without immediate surgery!!!

GHESTNUTS
We all know horses have one hoof per Leg...
Well... they kind of have two...
Hoof
Hoof
Hoof
Hoof
Chestnut is also a horse color
Earlier in their Evolution they had More!
Mesohippus
Modern horses have the remnants of one of these hooves on their legs...
Chestnut
They still make hoof horn too!

FAIRY-FINGERS
Baby Horses (foals) are born With a protective Coating on their feet to keep their hooves from cutting up their mother's uterus
Look like tentacles
Fall off a few hours after Birth
